PROJECT REGARDING "EVALUATION OF THE IMPACT OF BAKERIES EMISSION, and TO PLAN CONTROL STRATEGIES IN TERMS OF EFFICIENT FUEL" BY M.C.G.M.

SUMMARY

The total number of bakeries is 622 in Mumbai as per municipal record, and they are located all over Mumbai. 'L' Ward has maximum number of bakeries [58]. The 80% of Bakeries are using firewood as a fuel, 11% of Bakeries are using Electricity, 2% of Bakeries are using Diesel, however remaining 7% of Bakeries are using combined fuel.

63% Bakeries are having Chimney height below 30 ft, and 75 % of them are having horizontal furnaces . It seems Quantum of firewood used is about 600 MTPD, diesel is about 10 MTPD and LPG is about 1.6 M^3 . Bakeries are emitting about 800Kg of air pollutants per day i.e. 0.108% of total air pollution load released in Mumbai. The emission factor study indicates that firewood is a cleaner fuel than diesel. It seems Firewood is the most economical fuel amongst the fuels used at present by the bakers.

As Bakeries are located in the midst of residential colonies, it is essential that (i) dry firewood shall be used (ii) Bakeries emission shall be monitored, once in every six months to keep them in proper operating conditions i.e. emitting less pollution (iii) Big bakeries shall use , Electricity as a clean fuel and they should also explore the possibility of using L.P.G. / Piped Natural Gas (PNG) as fuel by making necessary modifications in the furnaces.

1. INTRODUCTION:

Municipal Corporation of Greater Mumbai (MCGM) has been monitoring air quality in Mumbai for the last 24 years. On studying the air quality status, it is observed that Suspended Particulate Matter [SPM] is the predominant pollutant in Mumbai's air. Ambient air quality levels of SPM are in the range of $120 \mu\text{g}/\text{M}^3$ to $390 \mu\text{g}/\text{M}^3$, Sulphur dioxide is in the range of $7 \mu\text{g}/\text{M}^3$ to $25 \mu\text{g}/\text{M}^3$, and Nitrogen dioxide in the range of $16 \mu\text{g}/\text{M}^3$ to $57 \mu\text{g}/\text{M}^3$. On comparing ambient air quality levels with the air quality standards for the residential area, promulgated by Central Pollution Control Board and adopted by Maharashtra Pollution Control Board, the air quality levels of SPM, SO_2 , NO_2 have exceeded the standards by 10% to 99%, 0% to 2%, 0% to 42%, respectively in the different areas of Mumbai.

Table No.1 CENTRAL POLLUTION CONTROL BOARD
NOTIFICATION

Delhi, the 11th April, 1994

NATIONAL AMBIENT AIR QUALITY STANDARDS (11TH APRIL 1994)

S.O.384(E).-The Central Pollution Control Board in exercise of its powers conferred under section 16(2) (h) of Air (Prevention and Control of Pollution) Act, 1981 hereby notify the National Ambient Quality Standards with immediate effect.

Parameter	Exposure period	Industrial area	Residential, Rural & other area	Sensitive area	Method Of Measurement
1	2	3	4	5	6
SO_2	Annual avg.I 24 hrs. avg	80 $\mu\text{g}/\text{m}^3$ 120 $\mu\text{g}/\text{m}^3$	60 $\mu\text{g}/\text{m}^3$ 80 $\mu\text{g}/\text{m}^3$	15 $\mu\text{g}/\text{m}^3$ 30 $\mu\text{g}/\text{m}^3$	1. Improved West & Gaeke 2. Ultraviolet fluorescence
Nitrogen as NO_2	Annual avg.I 24 hrs. avg.II	80 $\mu\text{g}/\text{m}^3$ 120 $\mu\text{g}/\text{m}^3$	60 $\mu\text{g}/\text{m}^3$ 80 $\mu\text{g}/\text{m}^3$	15 $\mu\text{g}/\text{m}^3$ 30 $\mu\text{g}/\text{m}^3$	1. Jacob & Hochheiser modified (Na-Arsenic) 2. Gas Phase Chemiluminescence
SPM	Annual avg.I 24 hrs. avg.II	360 $\mu\text{g}/\text{m}^3$ 500 $\mu\text{g}/\text{m}^3$	140 $\mu\text{g}/\text{m}^3$ 200 $\mu\text{g}/\text{m}^3$	70 $\mu\text{g}/\text{m}^3$ 100 $\mu\text{g}/\text{m}^3$	(Average flow rate not less than $1.1 \text{ m}^3/\text{minute}$)

Lead	Annual avg.I 24 hrs. avg.II	1.0 $\mu\text{g}/\text{m}^3$ 1.5 $\mu\text{g}/\text{m}^3$	0.75 $\mu\text{g}/\text{m}^3$ 1.0 $\mu\text{g}/\text{m}^3$	0.50 $\mu\text{g}/\text{m}^3$ 0.75 $\mu\text{g}/\text{m}^3$	-AAS metered after sampling using EPM 2000 or equivalent filter paper.
Carbon Monoxide	8 hrs. II 1 hr.	5.0 mg/m^3 10.0 mg/m^3	2.0 mg/m^3 4.0 mg/m^3	1.0 mg/m^3 2.0 mg/m^3	-Non dissuasive infrared spectroscopy

- I) Annual arithmetic mean minimum 104 measurements in a year taken twice a week 24 hrly at uniform interval.
- II) 24 hrly/8 hrly values should be met 98% of the time in a year, however, 2% of the time, it may exceed but not on two consecutive days.

NOTE:

1. National Ambient Air Quality Standard: The levels of air quality necessary with an adequate margin of safety, to protect the public health, vegetation and property.
2. Whenever and wherever two consecutive values exceeds the limit specified above for the respective category, it would be considered adequate reason to institute regular/continuous monitoring and further investigations.
3. The State Government/State Board shall notify the sensitive and other areas in the respective states within a period of six months from the date of Notification of National Ambient Air Quality Standards.

As per URBAIR project, which was sponsored by Govt. of Maharashtra & World Bank in the year 1996, states that Bakeries are one of the major sources of air pollution in Mumbai . Bakery products, such as bread, biscuits, cakes etc. are very popular, especially the bread, as 50% of the population of Mumbai survives on the bread.

In view of this a project proposal was submitted to MMR Environment Improvement Society on 'Evaluation of the impact of Bakeries emission and to plan control strategies in terms of efficient fuel' at the cost of Rs.6, 03,000/- in the year 1998. The approval for the project was received in November 2001 & payment of the first installment was received on 22nd March 2002.

2. BACKGROUND INFORMATION :

Municipal Corporation of Greater Mumbai [MCGM], is the local authority for controlling the Bakery establishments. Bakeries are producing food products; therefore, Medical Officer Health [MOH] of Wards of MCGM supervises them, and issues licenses to operate in the area under jurisdiction of MCGM. It is mandatory for Bakeries' owners to register them with MOH of the respective Ward Offices where Bakeries are located. The emissions of air pollutants released from the chimneys of bakeries affect the population residing in the surrounding area. The information regarding the Bakeries such as type of fuel used, type of furnace/oven, chimney height, etc. is incorporated in the license issued by MCGM.

Some of the big Bakeries are using motive power and, therefore, they require factory permit under Section 390 of BMC Act (1888) from Assistant Municipal Commissioner / Assistant Engineer (Building & Factory) of the respective wards. The No Objection Certificate [NOC] from pollution angle in order to issue factory permit under section 390 of BMC (1888) Act is given by Environment Department of MCGM.

Bakers have formed Unions to manage their internal/external problems systematically & effectively. At present, there are two Unions (i) Bombay Bakers Association & (ii) India Bakery Association. Most of the bakeries in the city are members of either Union or both Unions. Timber merchants play major role in production of bread as they supply fuel i.e. firewood, the most popular fuel amongst the bakers. There is also Timber Merchant Association, which is carrying out hardly any welfare activities as per the individual traders.

3. STATISTICS OF THE BAKERIES:

The first and foremost priority is to carry out census of the bakeries. It was observed that there are four types of record available, giving the statistics about the bakeries in Mumbai.

(i) Municipal Record; (ii) Bakery Union Record; (iii) Timber Merchant Record; and (iv) URBAIR Report.

(i) Municipal Record:

The most reliable record is Municipal Record of the Bakeries as it is well-documented record of the licenses issued by MCGM and it is a source of revenue for MCGM. As per the Municipal Ward Office record there are 622 bakeries. This number is used for studying and evaluating the status of Bakeries in Mumbai.

(ii) Bakery Union Record:

The two unions have given the list of their members. Bombay Bakers Association has 204 Bakers members and India Bakery Association has 579. Taking the cognizance of common Membership, there are 650 bakeries in Mumbai as per Bakery Unions record.

(iii) Timber Merchants:

Timber Merchants were visited to get first hand information about firewood used in the Bakeries. They have stated that they are supplying firewood to about 1500 bakeries. Unfortunately they were not in a position to substantiate their claim by giving the names of the bakeries whom they are supplying the firewood. Since they were not willing to give the names even when they were promised that the names will be kept confidential, the reliability of their figure was questionable. Their figures, therefore, about the number of Bakeries was not acceptable.

(iv) URBAIR Report:

URBAIR Report of 1996 states that there were 1200 Bakeries in Mumbai . It was, therefore, felt necessary to contact URBAIR'S consultant i.e. M/S Aditya who executed the project. He was contacted, but he was also unable to substantiate the figure of 1200 bakeries by giving their names and addresses ,therefore , the reliability of their figure was doubtful, and it was not acceptable.

This report is based on the information supplied by the Municipal Ward Offices, of MCGM i.e. Municipal record, which is authentic. Again these bakeries are having valid licenses to operate in the Municipal limits.

4. LOCATION OF BAKERIES :

The city of Mumbai is divided in 23 Wards for the administrative convenience. The information of Bakeries collected from the Ward offices, is authentic as these bakeries are registered with them and are having the valid MCGM license to operate in the municipal limits. There are total 622 bakeries in Mumbai. **The maximum number of bakeries (58) are located in "L" ward and the minimum number of bakeries (6) are in 'H West' Ward. (Table No.2)**

TOTAL	622	446	101	24	12	6	0	60	2	11	22	1	62

Mumbai is divided in three zones as City, Eastern & Western Suburbs. City zone has nine wards [A, B, C, D, E, F/S, F/N, G/S, G/N], Eastern suburb zone has seven wards [L, M/E, M/W, N, P/S, P/N, T], and Western Suburb zone has seven wards [H/E, H/W, K/E, K/W, R/S, R/C, R/N]. Out of 622 bakeries, 223 are in the city zone area, 193 are in Eastern Suburb zone area and 206 in the Western Suburb zone area. (Table No.3)

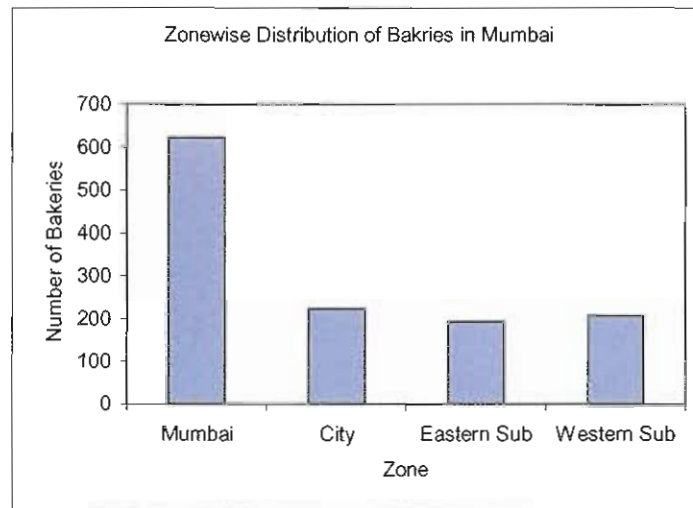

Table No.3 ZONE WISE DISTRIBUTION OF BAKERIES

Mumbai (Total)	City	Eastern Sub	Western Sub
622	223	193	206

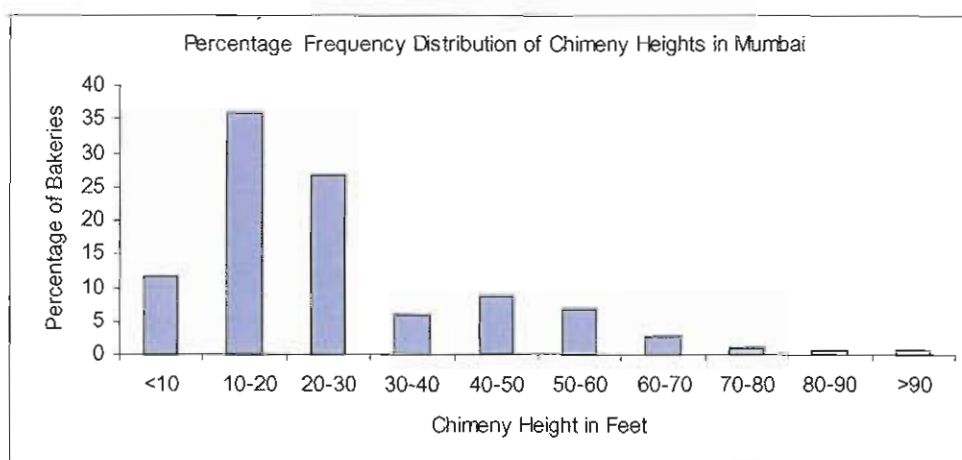

Out of 23 wards "E" ward was the first one to give complete information as requested in the proforma. Subsequently, other 8 wards followed the suit. Thus complete information about the bakeries, as per Performa sent to the Wards, is received from the 9 wards only.

5. CLASSIFICATION ON THE BASIS OF STACKS' HEIGHT :

The stacks of the bakeries play crucial role, as this is the main point from where maximum pollution of the bakeries, is released. The taller the stack of the chimney, it is more beneficial to the citizens living in the surrounding area of the Bakery, as higher the dispersion of pollution released from the stacks, amounting to the more the dilution of pollution & lesser is the impact on surrounding ambient air

Out of total 622 bakeries in Mumbai, the information, about the stack heights of 418 (67%) bakeries, is available in the wards. The distribution of stack heights in the various ranges is analyzed by grouping the stack heights in the different ranges, such as <10, 10-20, 20-30, ---90ft. On the whole 36% of the bakeries are having stack height in the range of 10 to 20 ft, and 27% of the bakeries are having stack height in the range of 20 to 30 ft. Thus 63 % of the bakeries are having height less than 30 ft. Only 5% of Bakeries are having stack height more than 60 ft. (Table No.4)

Table No. 4 THE CHIMNEY HEIGHTS OF THE BAKERIES												
Height In Feet												
WARD	NO.	<10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90	>90	Not known

The stack height distribution in city is studied as per City zone, Eastern Suburban zone, & Western Suburban zone area. (Table No.5)

Table No.5. PERCENTAGE FREQUENCY DISTRIBUTION OF CHIMNEY HEIGHT IN MUMBAI, CITY & SUBURBS

City		Western sub		Eastern sub		Mumbai city Whole	
Ht. In ft.	%	Ht. In ft.	%	Ht. In ft.	%	Ht. In ft.	%
<10	9.2	<10	33.3	<10	0.5	<10	11.6
10-20	6.1	10-20	36.1	10-20	57.1	10-20	35.9
20-30	21.4	20-30	15.7	20-30	36.8	20-30	26.6
30-40	13.7	30-40	0.9	30-40	2.7	30-40	5.7
40-50	22.1	40-50	3.7	40-50	1.6	40-50	8.6
50-60	12.2	50-60	9.3	50-60	1.1	50-60	6.7
60-70	8.4	60-70	0	60-70	0	60-70	2.6
70-80	3.1	70-80	0	70-80	0	70-80	1
80-90	2.3	80-90	0	80-90	0	80-90	0.7
>90	1.5	>90	1	>90	0	>90	0.7

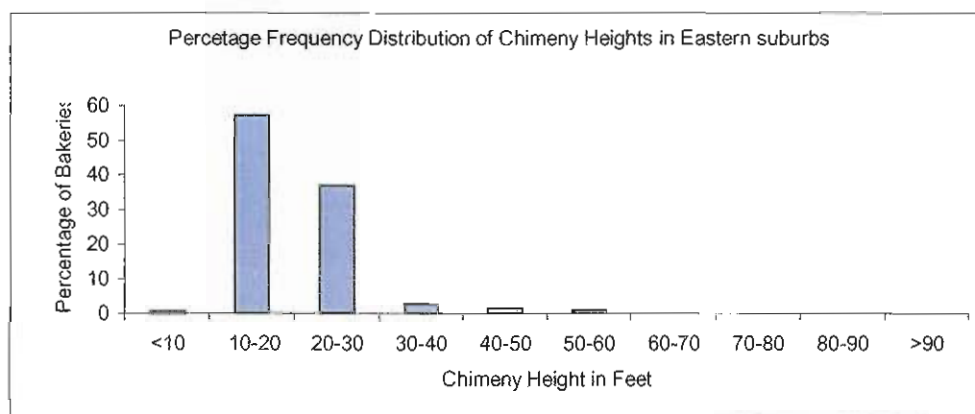

City Area:

It is seen that there are 223 bakeries in the city area. The 15% bakeries are having stack height in the range of 0 to 20 ft. & 69% bakeries are having height in the range of 20 to 60 ft. 14% bakeries are having stack height in the range of 60 to 90 ft. & 1.5% Bakeries are having stack height more than 90 ft.

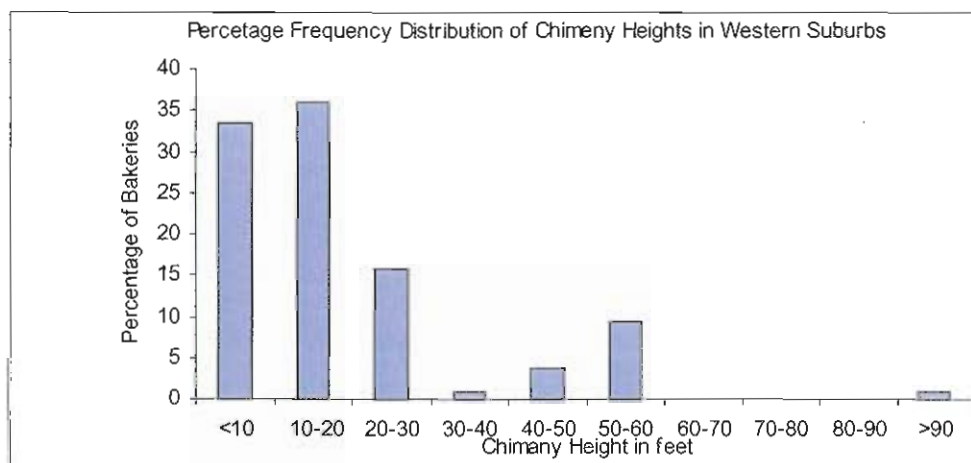

Eastern Suburban Area:

Out of 193 bakeries in the Eastern Suburban Area, stack height information about 95 Bakeries is available. 58% Bakeries are having the stack height in the range of 0 to 20 ft, & 94 % Bakeries are having stack height less than 30 ft., 6% Bakeries are having stack height in the range of 30 to 60 ft. Thus, the majority of stacks are short stacks in Eastern Suburban area .

Western Suburban Area :

Out of 206 Bakeries in the Western Suburban Area, the stack height information about 195 bakeries is available. 69% Bakeries are having stack height in the range of 0 to 20 ft. 85% Bakeries are having stack height less than 30 ft., 9.3% Bakeries are having stack height in the range of 50 to

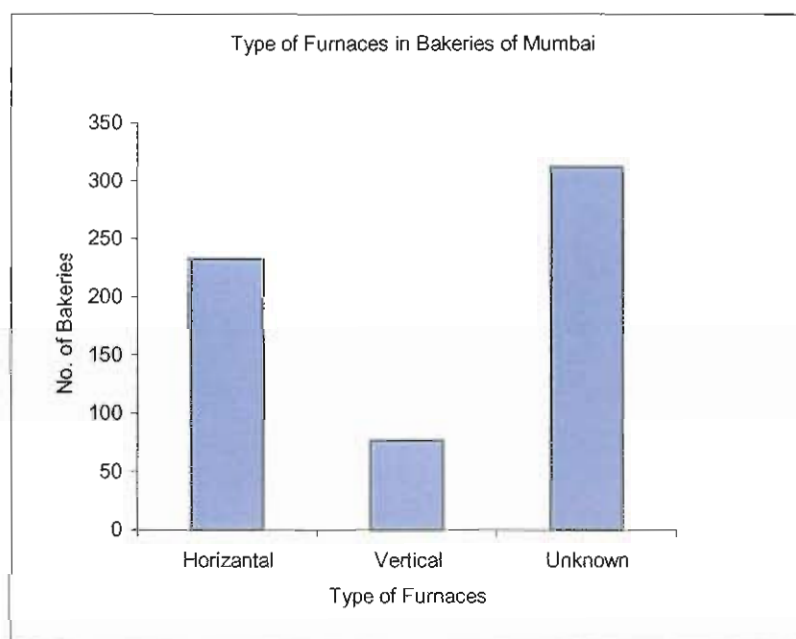

60 ft. Only 1% Bakeries are having stack height less than 90 ft.

On the whole Bakeries have short stacks & they are releasing pollution at an height which affects the common man.

6. CLASSIFICATION ON THE BASIS OF FURNACE TYPE:

The main source of air pollution generation in the bakeries is the furnace where fuel is burnt to provide heat to bake the Bakery products. The efficiency of the furnace determines the quantum of pollution released. The more efficient is the furnace capacity to burn the fuel, less is the pollution emitted from the bakeries. Two types of furnaces i.e. (1) Horizontal (2) Vertical type are installed in

the Bakery. Out of total 622 Bakeries, the information about the type furnaces installed in the Bakeries, is available for 310 bakeries i.e. 50% of the total number of Bakeries. On studying the information, it is seen that 75% of the Bakeries have horizontal furnace & 25% have vertical furnaces.

Table No. 6 TYPE OF FURNACES IN BAKERIES

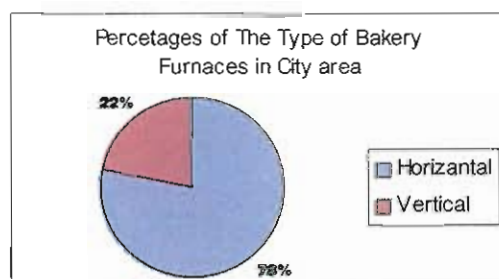

Type	Number
Horizontal	233
Vertical	77
Unknown	312

Table No.7 : ZONE WISE DISTRIBUTION OF THE BAKERIES AS PER FURNACE TYPE:

PERCENTAGE OF THE TYPE OF FURNACES				
Type	City	Western Sub	Eastern Sub	Mumbai
Horizontal	78	40%	95	75
Vertical	22	60%	5	25

City Area :

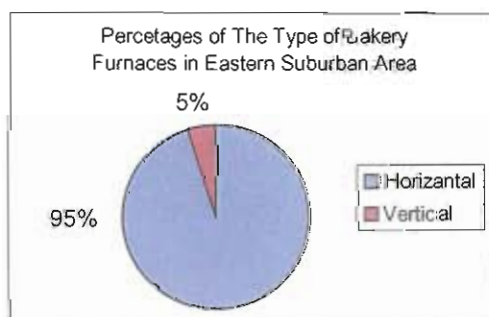

Out of 233 Bakeries located in the city are, information regarding type of furnace for 121 Bakeries is available. 78% of the Bakeries are having horizontal furnace & 22% of the Bakeries are having

vertical furnace. (Table No.7)

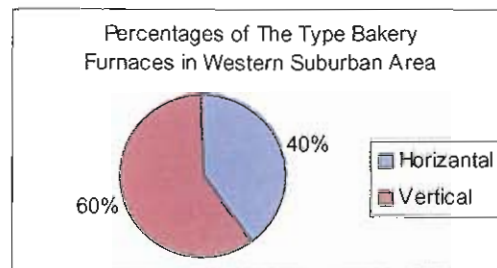

Eastern Suburb Area :

Out of 193 Bakeries in the Eastern Suburb the information from 116 Bakeries has been received & 95% are hang horizontal furnaces.(Table No.7)

Western Suburb Area

Out of 206 Bakeries in the Western Suburbs the information from 93 Bakeries has been received & 40% Bakeries have horizontal furnace. (Table No.7)

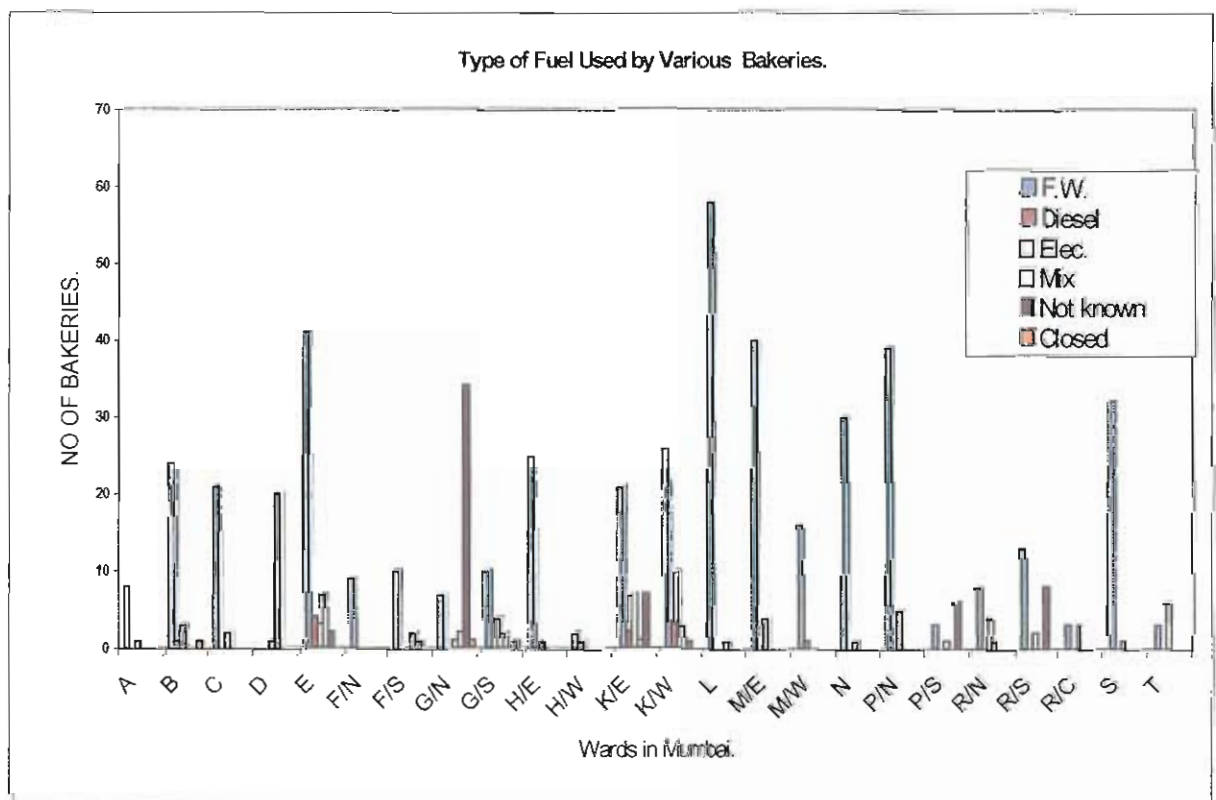

City & Eastern Suburb zone areas have maximum horizontal type furnaces installed in the Bakeries whereas Western Suburb zone area Bakeries are having Vertical furnaces installed in the Bakeries.

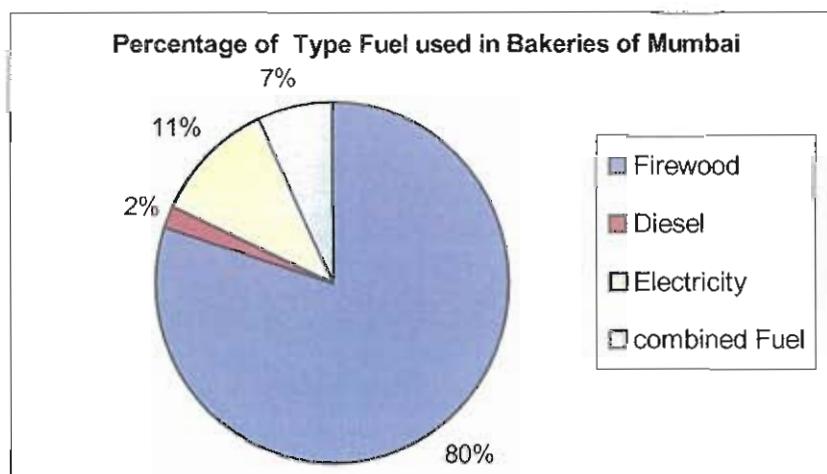

7. CLASSIFICATION OF BAKERIES BASED ON THE FUEL :-

Out of 622 Bakeries, the data regarding 557 Bakeries (89%) about type of the fuel used was available. The fuel used in the bakeries is broadly classified as (i) firewood, (ii) diesel, (iii) electricity and (iv) mixed or combined fuels. Majority of the bakeries is using either firewood or mixed fuels.

The Fuel consumption data of only 557 bakeries is available. Bakeries operated on the

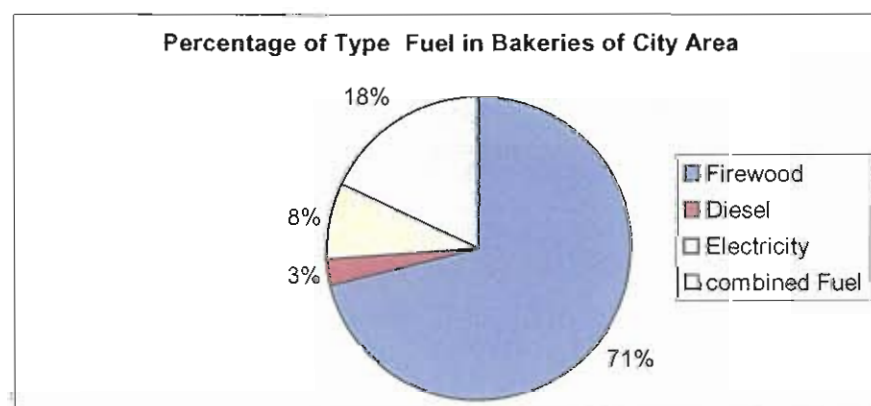

firewood are 446 (80%) in Mumbai. There are 60 Bakeries using electricity i.e. (11%). There are 12(2%) bakeries using diesel. There is practice to have the ovens/furnaces operating on firewood and diesel, or diesel and electricity or firewood and electricity. The reason having the facility to use two or three fuels i.e. combined fuel, to keep the business running smoothly and uninterrupted, in case there is a problem in the availability of the fuel.

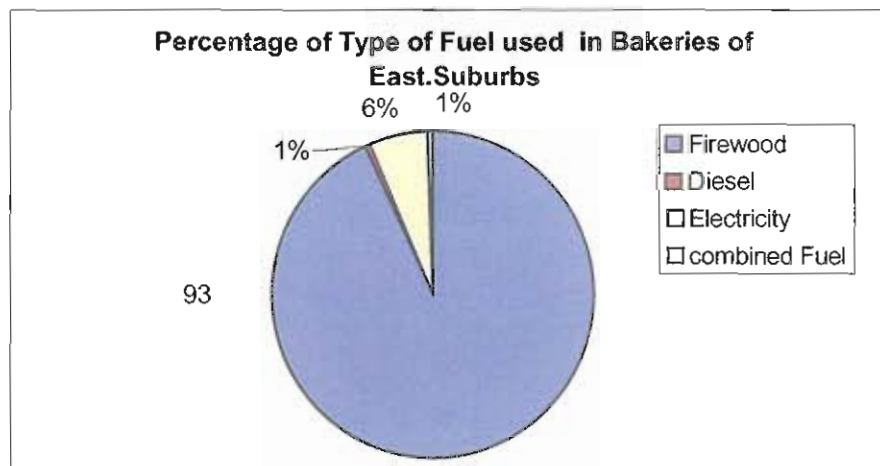

There are 36 Bakeries using Combined fuel such as Electricity + firewood, firewood + diesel, diesel + Electricity, L.P.G. + Diesel etc. Electricity & firewood is the most popular combination as it is used in the 60 Bakeries, and firewood + diesel is the least popular combination in the bakeries, as only 2 Bakeries are using this combination. Electricity + firewood combination is the most popular due to the fact firewood is the most economical and reliable fuel available in the Indian market. As LPG is newly introduced fuel for the bakeries, therefore, it has only 3 bakeries using this combination of L.P.G. + diesel. As such it is yet to get recognition as Bakery fuel amongst the Bakers. The different fuel used in the city area shows that firewood is the major fuel, followed by combined fuel use in the bakeries.

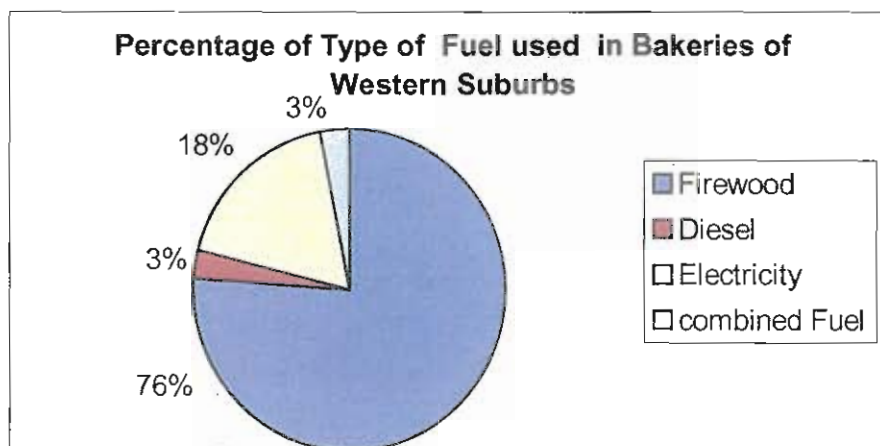

The different fuel used in the City area shows that firewood is the major fuel.

The different fuel used in the Eastern Suburbs shows that firewood is the major fuel.

The different fuel used in the Western Suburb shows that firewood is the major fuel but there are bakeries [18%] using Electricity.

8. FUEL CONSUMPTION:

Out of 622, only for 230 bakeries the quantum of used is known, and for 392 bakeries the quantum of the fuel used is unknown. When the letters were written to bakeries to inform about the quantum of fuel used, only 63 bakeries have given the information about fuel consumption, 368 have

received the letter but not replied, and the letters written to 25 bakeries have been returned by Post Office as "addressee not known".

The fuel consumption of Bakeries is studied in detail. The main fuel for the Bakeries is firewood, as 80% of them are using firewood as fuel in the Bakeries.

The consumption of firewood is studied in two ranges i.e. less than 100 more than 100 kg/day. The Bakeries using less than 100 kg/day are 101, i.e. 81% and those using more than 100kg/day are 19%. The quantum of fuel consumption of only 28% Bakeries is known i.e. out of 446 Bakeries the fuel consumption of 125 Bakeries is known, in the City of Mumbai.

The fuel consumption of the diesel operated furnaces for only 12 is known and it is in the range of <50litres/day for 50% Bakeries & more than 50 liter for other 50%.

After firewood, electricity is the next popular fuel as it is free of Air pollution. There are 60 Bakeries operating on electricity. Their distribution in the city, Eastern & Western Suburb is 15 Bakeries are in city, 35 Bakeries in Western Suburb & 10 Bakeries in the Eastern Suburb.

As per the information collected from the individual Bakeries' owners, the average consumption of firewood is about 200 Kg/day/ Bakery, and Diesel consumption is about 430 liters/day / Bakery.

Firewood:

This fuel is most popular fuel for the bakeries in Mumbai as it is cheap, readily available, easy to maintain and produces the bread and allied products as per the local taste and is economically viable as the unskilled labour is required to carry out the job. The firewood is brought in from the hinterland as viz. Sagamner, Latur, Ahmadnagar. Previously it used to be brought from Madhya Pradesh, Gujrat, Goa, Kamataka but now Madhya Pradesh, Goa & Kamataka have stopped sending the wood to Mumbai as the prices of wood shot up in the local market even the wood was not available in Goa to burn the dead bodies. Now wood is brought in Mumbai mainly from the Marathwada, Vidarbha and Gujrat. The wood from Vidarbha is generally dry wood. The firewood is generally Babul, Subabul, Grasopis. The Babul, Subabul, Grasopis are the trees which do not require any permission to cut and burn them by Govt. resolution of Revenue & Forest Deptt., Maharashtra Govt. The trees Aain, Kunjal are wild trees in the forest area but they require permission of the Forest Deptt. to cut them.

Many times trees are cut to cultivate Mango, Cashewnuts and that wood is sent as firewood. As per timber bakeries consume Merchant 600 MTPD wood. There are wood depots all over Mumbai to cater the need of firewood for the bakeries. They are at Deonar, Kurla, Mahim and Dharavi. The wooden logs ½ to 2' long made at the site prior to sending to Mumbai and then it is dispatched to Mumbai. One truck carries 13 to 14 tonnes though the carrying capacity of the truck is 10 tonnes.

Tata Tempo carries about 400 kg wood to be supplied to the retail customers. One tempo can supply firewood to 3 to 4 customers.

Minimum requirement of wood of any bakery is 150 kg/day, since 50 kg are required to achieve the desired temperature and the ash content is generally 2%. Thus each bakery discharges on an average about 3 kg. ash everyday. In the past this ash was used to clean the utensil by the population, but now it is dumped in the municipal dustbins as better cleansing powder are available in the market.

The cost of the wood varies between Rs. 1.60/kg to Rs. 2.0/kg. It is observed that if wooden logs are thin, then sufficient heat is not generated. The dry wood gives less smoke but dry wood is expensive, therefore, bakery personnel use wet and dry wood mixed in proportion of 20:80.

Out of all these variety of woods Babul is the best or it is readily available, economically viable and having good calorific value. If it is half burnt, it gives good quality coal.

Electricity :

There are 60 Bakeries using electricity and maximum number (10) bakeries are in the K/west Ward.

Diesel :

There are 12 bakeries using light diesel oil. Six bakeries are using diesel oil less than 50 litre/day and the consumption of other 6 bakeries is not known.

Combined fuel :

There are 39 bakeries having the two types fuel as a precaution to maintain their schedule against non-availability of the fuel and spoiling their market. There are 23 bakeries having both electricity and firewood, in case there is electrical failure, they can always revert back to firewood and maintain their schedule of preparing bread, etc. There are 11 bakeries having electricity and diesel and only 2 bakeries using firewood and diesel. There are 3 bakeries using LPG & PNG.

Electricity is the clean fuel, and firewood is the unclean fuel in respect emissions, whereas firewood is the best as far as the taste of bakery products is concerned, as well as the economic viability and employment of unskilled labour.

9. STACK MONITORING :

It is learnt that Bakeries do not require M.P.C.B consent, therefore, the sampling port holes are not readily available in stacks/ chimneys as they are present in the stacks of big industries. The Bakers

are reluctant to make the port-holes in stacks as they are afraid that it may affect or upset masonry work as they are as old as 40 to 50 years old.

The stack monitoring of 10 stacks was carried out in Mumbai under this project. The four stacks of the Bakeries using firewood as fuel were monitored, & four stacks using diesel as fuel were monitored, two stacks of the Bakeries using electricity as fuel were monitored. Again Britannia Company has 20 stacks using LPG, LDO, & HSD, and their emissions are regularly monitored by M/s. Mahabal Enviro - Engineers Pvt. Ltd. While calculating Bakeries emissions factors, their stack monitoring data was also considered in evaluating Emission Factors as well as U.K. Emission factors [ANNEXURE II & III].

Table No.8. Emission Factor used to calculate Bakery's Emissions

EMISSION FACTOR		Kg/MT	
Fuel : WOOD			
	SPM	0.35	
	SO ₂	0.285	
	NO ₂	0.6	
Fuel : LDO			*Britannia
	SPM	1.28	22.63
	SO ₂	4.4	16.78
	NO ₂	1.09	
Fuel : LPG			
	SPM		4.2
			0.83
Fuel : HSD			
	SPM		1.7
	SO ₂		52.4

On studying the emission factors of different fuels (Table No.8), it seems that Wood is a clean fuel even compared to LPG, though it is hard to believe, however, this monitoring work is carried out in a prestigious firm like Britannia by reputed consultants M/s. Mahabal Enviro Engineers Pvt. Ltd. Emissions load of Particulate Matter, Sulphur di-oxide, Nitrogen di-oxide released in Mumbai's air due to various fuels used in the bakeries in Mumbai, is calculated using above mentioned emission factors, on the assumption that quantum of the fuel used by different bakeries is approximately as follows: Wood : 600 MTPD, diesel:10 MTPD, and LPG 1 M³. The total air pollution load released by Bakeries is 803.484 kg/day (Table No.9)

Table No.9 : Emission Load of Air Pollutants due to Bakeries in Mumbai.

Type of Fuel	Particulate Kg/Day	Sulfur Di-Oxide Kg/ Day	Nitrogen Di-Oxide Kg/ Day
Wood	210	171	360
Diesel	12.8	44	0.654
LPG	4.2	0.83	NA
Electricity	Traces	Traces	Traces
Total Pollutants	803.484 Kg/Day		

The total Emission load of Air pollutants released is 740 MTPD, thus the contribution of the Bakeries is 0.108% to the total air pollution load released in Mumbai, which is insignificant.

10. COST BENEFIT ANALYSIS OF AVAILABLE OPTIONS :

The economics of using various fuel has to be studied on the basis of the fuel cost and operation of the furnaces which are the cost variants . At present 80%of the bakeries are using firewood as a fuel. Thus, in order to eliminate air pollution due to bakeries, the most preferred options by Bakery owner seem to be electricity and then firewood. The replacement of the firewood by any other fuel is difficult to be accepted by the Bakery Owners, since it is economical, most reliable fuel which can be handled by unskilled labour. Most of the Bakeries are operated by the migrant labour from Uttar Pradesh [U.P]. Even the purchase, installation, and regular operation of air pollution control equipment such as scrubber, cyclones etc.are not economically viable as Bakery is small service unit.

The cost of 1 litre of diesel is Rs. 22.1/litre. Everyday consumption of diesel is 50 litre/day. The cost of 1 kg is Rs. 1.60 per kg to Rs. 2 per kg and consumption of firewood by the bakeries per day is 150 kg/day, therefore, the cost of the fuel is Rs. 240 to Rs. 300/- day. The PNG option could not be discussed, as the bakeries in Mumbai do not use of it at present.

As per the information given by some of the bakery owners, if one uses firewood, the cost of the product is Rs. 14000/- to Rs. 15000/-. However, if the diesel is used to produce the same product, it costs Rs. 25,000/- . It is most economical to operate bakeries on the firewood & wood is therefore preferred by the Bakery owners.

The smoke emitted is entering the nearby houses causing respiratory diseases to them. To increase the combustion efficiency, it should be made mandatory to use dry wood by the Bakeries. The more efficient combustion ovens having secondary combustion chambers will have to be designed against the existing traditional ovens. Some arrangement should also be made to trap the

smoke emitted by the chimney such as water scrubber or making metal spiral outlet instead of straight outlet or to install baffles to increase the residence time for the smoke, to undergo secondary combustion of the smoke particles. Metallic Spiral outlet from furnace to the stack/chimney will need less space and secondary combustion will take place. However the cost will vary as per individual bakery, its difficult to make any comment on the same.

The vertical or horizontal furnaces will not make any difference to the combustion process as it helps to give more surface to burn and more air causes in the contact causing better combustion and less emission of the gaseous pollutants causing the pollution. When diesel is used, still the combustion efficiency has to be checked otherwise improper combustion of diesel will give rise to more pollution. Smoke which will be more dangerous to the human health causing respiratory disease right from cough, bronchitis to lung cancer etc. as the combustion of diesel gives rise to number of air pollutants. Whereas firewood leaves residue after burning i.e. ashes, diesel leaves hardly any residue. The supply of Natural gas to the Bakeries will be beneficial, as it is clean fuel. However, this fuel can be availed by the Bakeries, which are close to the Natural gas pipeline. The Bakeries are spread all over Mumbai and they may be far away from the Natural gas outlets and it may not be economically viable for the Bakeries to lay the pipeline for the natural gas. Thus small Bakeries who are responsible for creating small pockets of pollution cannot afford to use natural gas. The natural gas option is open only to big Bakeries as well as for the Bakeries that are close to the Natural gas pipeline.

Thus in ultimate analysis, there is no alternative to the firewood although it is emitting the smoke despite the fact that it is responsible for the deforestation. But at the same time it displaces the mosquitoes. Again it operates hardly two hours in one shift. There are general disadvantages of the deforestation such as it affects the Climate Change, Bio Diversity is extinguished, Habitat for the Wild Life is destroyed, the Eco-balance is affected, desertification of the land takes place causing the floods in the area but **the wood is renewable source of energy**. This can be summarized as follows:

The disadvantages of using firewood :

- (1) It needs lot of space to store it;
- (2) The forest cover is destroyed as it takes 3 to 5 years for the trees to grow; and
- (3) The smoke emitted to wood combustion causes respiratory diseases.

The disadvantages of using diesel :-

- (1) The smoke emitted due to diesel combustion is less compared to wood.;
- (2) The smoke causes respiratory disease;
- (3) It is expensive compared to firewood; and
- (4) It requires skilled labour to operate the ovens.

The disadvantages of using LPG/PNG

- (1). It is clean fuel having low flash point ,a potential fire hazard;
- (2).It is expensive compared to diesel and firewood;
- (3).It requires skilled labour ; and
- (4).The taste of product is different.

11. RECOMMENDATIONS :

1) Bakeries are essential part of our life for the daily bread. Therefore, they cannot be closed or shifted out but have to be modernized in such way that it is economically viable & technically feasible.

2) As the Bakeries are located to the midst of residential area, it should be mandatory to use dry firewood.

3) As the Bakeries are located to the midst of residential area. It should be made mandatory for all the bakeries to monitor their emission every three months, submit the same to environment department of M.C.G.M.

4) Bakeries should adopt the control measures such as secondary by installing battles or spiral outlet connecting to chimneys so as to increase residence time which help to carry out secondary combustion of flue gas.

5) In order to use cleaner fuel such as LPG/PNG, Big Bakeries should explore the possibility of using them as fuel to prepare products by making necessary modifications in the furnaces. After establishing the results, the method shall be adopted by other bakeries in phases.

11. ACTION PLAN FOR THE CONTROL OF EMISSIONS FOR THE BAKERIES IN MUMBAI

Sr.No	Action	Implementing Agency	Time Period
1.	To replace the firewood or Piped Natural Gas [PNG] whenever PNG is available.	Bakeries Owners / MCGM/MPCB	3 years in phases
2.	To install wet scrubber /ventury scrubber for reduction particulate matter wherever possible [availability of space].	Bakeries Owners	-do-
3.	To provide Baffles or Spiral outlet instead of straight to increase the residence time of the smoke.	-do-	-do-

4.	To increase the Chimney height for better dilution of the smoke/air pollution emitted from the chimney.	-do-	-do-
5.	To use the dry firewood instead of wet firewood, till installation of better fuel furnace.	-do-	1 yrs.
6.	To use the better firewood furnace{with better fuel efficiency and good lining to conserve heat} rather than traditional furnace used by the small Bakers who are not in position to replace the furnace.	-do-	2 yrs.
7.	To make it mandatory for all bakers to monitor their emission once in every six months and submit the report to the Environment dept. of MCGM/MPCB also they should provide the proper hole to the chimney for monitoring emissions	-do-	2 yrs.

13. TO EVALUATE VARIOUS OPTIONS FOR CONTROL OF AIR POLLUTION FROM BAKERIES IN MUMBAI .

The most popular Fuel used by the bakeries is wood; therefore, the options have to be considered accordingly. Wherever PNG is available, then it should be mandatory to the bakeries to use it as fuel. However, if the PNG is not available, following options can be considered along with the constraints.

The constraints are:

- a). Availability of space,
- b). Availability of water,
- c). Availability of drainage facility,
- d). Fuel-efficient furnace economically viable.

When the fuel used by the bakeries is wood, the pollution can be controlled, by carrying out secondary combustion of the smoke emitted by the bakeries or installing the water scrubber. The exhaust system will have to be modified to cater the needs of the secondary combustion. As the installing baffles increases residence time of the unburnt carbon particles in the smoke or spiral outlets connecting to the chimneys, the complete combustion will take place. Installing the water scrubber can control the pollution by the smoke emitted by the bakeries, provided water and drainage facility, and space is available.

12. ACTION PLAN FOR THE PRIORITIZING THE ACTIONS TO CONTROL AIR POLLUTION

Sr.No	Action	Implementing Agency	Time Period
I	To use the dry firewood instead of wet firewood, till installation of better fuel furnace.	Bakeries Owners / MCGM/MPCB	3 years in phases
II	To use the better firewood furnace rather than traditional furnace used by the small Bakers who are not in position to replace the furnace.	Bakeries Owners	-do-
III.	As monitoring is the backbone of successful enforcement, it should be mandatory for all bakers to monitor their emission every year and submit the report to the Environment department of MCGM/MPCB, also they should provide the proper hole to the chimney for monitoring emissions.	-do-	-do-
IV.	To replace the firewood BY PNG whenever PNG is available.	-do-	-do-
V.	To provide Baffles or Spiral outlet instead of straight to increase the residence time of the smoke.	-do-	1 yrs.
VI.	To install wet scrubber / ventury scrubber for reduction particulate matter wherever possible [subject to the availability of space & water].	-do-	2 yrs.
VII.	To increase the Chimney height for better dilution of the smoke, but is better to control pollution at the source.	-do-	2 yrs.

ANNEXURE III

Emission Factor of U.K. :

1. Fuel Oil Combustion

The emission factors given below are uncontrolled fuel oil combustion in industrial boilers. All units are kg of pollutant/ m³ of fuel oil.

(Note 1 m³ = 1000 litres)

	Residual / Heavy Fuel Oils	Distillate / Gas Oils ¹	Source
SO₂	18.8 X S	17.0 X S	AP - 42 1.6
NO_x	6.6	2.4	AP - 42 1.6
CO	0.6	0.6	AP - 42 1.6
NMVOC¹	0.0336	0.024	AP - 42 1.6
PM	3.69 ³	0.24	AP - 42 1.6
PM₁₀	86 % of PM	50 % of PM	AP - 42 1.6
Benzene	0.000026	0.000026	AP - 42 1.6
Lead³	0.00018	-	AP - 42 1.6

Notes:

1. Factors are for industrial type boilers, refer to AP-42 section 1.3 for more details or for emission factors for other boiler / furnace types.
2. S = wt % sulphur in fuel (if the sulphur content is unknown it can be assumed to be 3% for residual fuels and 0.4 % for distillates)
3. This factor assumes a sulphur content of 3 %.

Comments :

- Residual fuels include heavy, medium and light fuel oils
- Distillate fuels include paraffin, kerosene and gas oil.
- Emission factors also available from this source include : CO₂ , some metals and some speculated organic compounds (including some PAH)

The UK Emission Factors Database

[Emission Factor Database home page](#)

[General Information & Documentation](#)

[Line Mobile Sources](#)

[Area Sources](#)

[Point Sources](#)

[Links](#)

Detailed Emissions Values

Choose from the following processes to view detailed emissions factors:

[1.3 Waste Oil Burners](#)

[1.3 Wood Burners](#)

[1.3 Coal Combustion](#)

[1.3 Fuel Oil Combustion](#)

[1.3 Gas Combustion](#)

Emission factors relate the release of a pollutant from a particular process to an activity rate associated with that process (e.g. raw material usage, production rate etc.). Emission factors for industrial processes vary in detail, some may enable the use of abatement technologies to be taken into account whereas other will be more general.

Where emissions factors derived from UK data are not available other sources, either AP-42^a or Corinair^b, may have been used. The source of emission factors is noted alongside the factor.

The use of emission factors often requires a detailed knowledge of a process and it is important to consider the "appropriateness" or "relevance" of an emissions factor before applying it. Additionally some emission factors are more robust than others, depending on how they were derived and how much test data was available, this should be taken into account when considering the accuracy of emissions estimated from emission factors.

1.3 - Waste Oil Burners

The emission factors given below are for the uncontrolled burning of waste oil in small boilers. All units are kg of pollutant / m³ of waste oil.

	Emission Factor	Source
--	-----------------	--------

<http://www.rdg.co.uk/ukofd/detail13.htm>

4/4/02

1.3 - Fuel Oil Combustion

The emission factors given below are for uncontrolled fuel oil combustion in industrial boilers. All units are kg of pollutant / m³ of fuel oil (note: 1m³ = 1000 litres).

	Residual/ Heavy Fuel Oils ¹	Distillate/ Gas Oils ¹	Source
SO ₂ ²	18.8 x S	17.0 x S	AP-42 1.3
NO _x	6.6	2.4	AP-42 1.3
CO	0.6	0.6	AP-42 1.3
NM VOC	0.0336	0.024	AP-42 1.3
PM	3.69 ³	0.24	AP-42 1.3
PM ₁₀	86% of PM	50% of PM	AP-42 1.3
Benzene	0.000026	0.000026	AP-42 1.3
Lead	0.00018	-	AP-42 1.3

Notes:

1. Factors are for industrial type boilers, refer to AP-42 section 1.3 for more details or for emission factors for other boiler / furnace types.
2. S = wt % sulphur in fuel (if the sulphur content is unknown it can be assumed to be 3% for residual fuels and 0.4 % for distillates).
3. This factor assumes a sulphur content of 3%.

Comments:

- Residual fuels include heavy, medium and light fuel oils.
- Distillate fuels include paraffin, kerosene and gas oil.
- Emission factors also available from this source include: CO₂, some metals and some speciated organic compounds (including some PAH).

3 - Wood Burners

The emission factors given below are for uncontrolled wood fired boilers. All units are kg of pollutant / tonne of wood

	Emission Factor	Source
SO ₂	0.07	AP-42 1.6
NO _x	0.19	AP-42 1.6
CO	3.3	AP-42 1.6
NM VOC ¹	0.09	AP-42 1.6
PM	4.4	AP-42 1.6
PM ₁₀	90% of PM	AP-42 1.6
Benzene	0.005	AP-42 1.6
Lead ³	0.00022	AP-42 1.6

Notes:

1. Factor is for TOC

Comments:

- Emission factors for SO₂ NO_x and CO are for Fuel cell / Dutch oven boilers
- Emission factors also available from this source include: CO₂, some metals and some speciated organic compounds (including some PAH)

Sub :- Stack monitoring analysis report of
factory M/s. Bartania Co. Ltd. Ray Rd.
E. Ward.

Ref :- ~~TYPE~~ / ~~Env.~~ dt.
Routine Sampling.
.....

In connection with your aforesaid note the stack
monitoring was carried out on 31/7/01. The results of the
same are forwarded herewith please.

- 1) Date 31/7/01 - Time 12.45 ~~A.M.~~ / P.M.
- 2) Details of instruments - 'NETEL' stack monitoring kit.
- 3) Stack Identify - Stack attached to the oven
- 4) Stack Diameter - 0.30 mtr.
- 5) Height of the stack - 6.00 mtr. (20'-0")
- 6) Gas flow rate of the stack. 0.00023 m³/sec/oven $\times 7^{NWS} = 0.00161$ m³/hr
0.8287 m³/hr/oven $\times 7^{NWS} = 5.80$ m³/hr.
- 7) Average gas Temp. of stack -377 °C
- 8) Emission of pollutants.

Sr.No.	Name of the pollutants	Quantity	M.P.C.B. Limits.
1.	Total particulates.	<u>—</u> mg/Nm ³	<u>—</u> mg/Nm ³
2.	SO ₂	<u>0.0625</u> kg/day	<u>—</u> kg/day.

The above figures are instantaneous and can vary depending
on working condition please.

29/8/2001
E.E.(E.I.G.) ILC

SP/822000.

note - As boilers were in O/C working condition only
effluent from boiler was analysed.

SE(E24)
